**Subject:** ICL Petition SR TMDL

Hi Dave,

Can you fwd me the petition to re-do this TMDL. And can you/Leigh keep Ben and I in the loop on this issue. It does have significant implications for the Hell Canyon Idaho Power CWA 401 and FERC license. Idaho Power is relying on the upstream measures in the SR Phos TMDL to improve DO in Brownlee Reservoir and downstream. And based on that, is proposing only minor additional DO improvements in the 401 application. But, as Ben has pointed out, the phos TMDL is likely overestimating the resultant DO levels for various reasons.

Thanks,  
John
